

Senior Data Scientist with over 7 years of experience building and scaling production-grade ML systems. I specialize in taking core systems from research to reliable production by establishing the engineering standards and infrastructure required for real-world performance. With a background in managing large-scale operations and cross-functional projects, I focus on delivering high-impact features that reduce operational noise and drive organizational productivity. I bring a practical, decision-oriented approach to transforming experimental frameworks into robust, scalable solutions.

PROFESSIONAL EXPERIENCE

Skyhawk Security - Cloud Security

Senior Data Scientist | 2025-today

- **Engineering Leadership:** Established team-wide methodology and repository standards (dual-repo architecture), significantly improving code robustness and deployment velocity for the Research team.
- **Knowledge & Code Architecture:** Architected the DS-Research **Information Center**, a centralized knowledge hub and code-integrated reference system used by the VP of Research, Researchers, and Senior DS to standardize methodologies.
- **LLM-Driven Labeling:** Developed a novel labeling methodology utilizing **LLMs (Claude & Gemini via VertexAI)** to replace legacy LabelModels, creating a scalable, automated pipeline for high-quality supervised training data.
- **Model Re-Architecture:** Spearheaded the transition of the core CDR system from an unsupervised daily-trained model to a **supervised XGBoost framework**, utilizing LLM-derived labels to significantly reduce false positives and improve precision-recall.
- **Cross-Functional Collaboration:** Partnered with department managers on strategic projects to enhance company-wide productivity and streamline the delivery of data-driven security features.
- **Production Standards:** Developed shared repository utilities to ensure all production models are deterministic and robust, facilitating clearer monitoring and investigation in live security environments.

Bluevine – Fintech

Senior Data Scientist | 2023 – 2025

- **End-to-End Model Deployment:** Developed and deployed a real-time fraud detection model for a new client onboarding, leveraging data from six external providers and managing the lifecycle from research to production as an **AWS SageMaker endpoint**.
- **Scalable ML Architecture:** Designed and implemented a robust architecture for model training and testing, enabling efficient experimentation and ensuring sustained performance through established monitoring methodologies.
- **Monitoring Infrastructure:** Initiated and developed the Data Science team's monitoring system using **Grafana**, establishing a comprehensive methodology for tracking feature-level stability, model scores, and post-score decisions.
- **Regulatory Compliance:** Collaborated with Risk Detection Analysts and Data Engineering to seamlessly integrate fraud models into production, ensuring strict adherence to BSA/AML and KYB requirements.

MarpAI Health – Medical Insurance Startup

Data Scientist | 2020 - 2022

- **Predictive Modeling & R&D:** Led the research and development of ML models for **15+ chronic conditions**, utilizing advanced feature engineering and hyperparameter tuning to meet specific clinical and business precision-recall targets.
- **End-to-End Research Ecosystem:** Established the company's experimental pipelines and model development methodologies, delivering high-quality trained models for backend production integration.
- **Data Infrastructure & Engineering:** Built a unified data ecosystem using **Redshift and PostgreSQL**, managing the full data lifecycle from diverse source consolidation to cleansing, labeling, and training-set preparation.
- **Stakeholder Empowerment:** Developed a **Streamlit** application that enabled medical

doctors to interact with tabular databases, bridging the gap between clinical expertise and technical data research.

MAX – Credit Cards - Fraud Department

Data Scientist | 2018 - 2020

- **Fraud Detection Architecture:** Architected a hybrid fraud detection system monitoring millions of transactions for **50,000+ merchants**, integrating supervised (**XGBoost**) and unsupervised (**Isolation Forest**) pipelines.
- **E2E Model Development:** Spearheaded the research, spatial-temporal feature engineering, and deployment of models to detect fraudulent tourist transactions and emerging fraud patterns.
- **Operational Impact:** Built an automated alerting platform that translated model outputs into actionable insights, enabling rapid merchant intervention and reducing overall financial exposure.

Technical Skills

- **Machine Learning:** XGBoost, Random Forest, Isolation Forest, Deep Learning, LLMs (RAG, Prompt Engineering), Clustering (K-Means), KNN.
- **Data Engineering & Search:** SQL (Redshift, Athena), ElasticSearch, PySpark, EMR, Data Pipeline Orchestration.
- **Cloud & Tools:** AWS (Bedrock, SageMaker, S3), GCP (VertexAI), Git, Docker, Grafana, Tableau.
- **Languages:** Python (Pandas, Scikit-Learn, NumPy, SciPy), SQL
- **Certifications:** **NLP Specialization** (Classification and Vector Spaces) – Coursera.

EDUCATION

M.Sc., [Industrial Engineering \(Data Science Track\) | Tel Aviv University](#) | 2019 – 2023

Thesis: Developed a **Graph-based Multi-distance Feature Selection** framework for multi-class classification tasks under the guidance of [Dr. Neta Rabin](#).

[Thesis paper](#), [Thesis GIT](#)

B.Sc., [Industrial Engineering & Management | Tel Aviv University](#) | 2012 – 2016

Specialization: Information Systems.

Leadership

Major (Res.), Deputy Battalion Commander | IDF Armored Corps | 2023 – Present

- **Strategic Leadership:** Promoted to Major based on exceptional performance; served as the most senior authority in the battalion for **Operations and Logistics**, overseeing large-scale strategic planning.
- **Organizational Scaling:** Built and led 4 specialized departments totaling 70 personnel, providing direct mentorship and management for 4 Captains and 3 Master Sergeants.
